

FOR IMMEDIATE RELEASE

**Safeguard Equipment Unveils Groundbreaking Addition to Safeguard® Solution Suite at
DistribUTECH 2024 in Orlando, Florida:
The Safeguard WebApp**

Post Falls, Idaho, Wednesday March 6, 2024– Safeguard Equipment®, a leader in innovative safety solutions for utility, construction, telecom, and contractors facing environments where current and voltage may be present, is proud to announce the launch of its latest offering, the *Safeguard WebApp* (WebApp). This cutting-edge addition to the Safeguard Solution Suite, which includes the Compass®, Compass Pro®, MobileApp and now the WebApp, revolutionizes team management and safety, empowering companies to enhance operational efficiency and ensure the well-being of their workforce like never before.

The WebApp is a comprehensive cloud-based platform designed to streamline team management and safety protocols for companies operating in dynamic and hazardous environments. With its multi-user administrative capabilities, the WebApp prioritizes the safety and efficiency of entire teams, whether in the field or office.

Key features of the WebApp include:

User Management: Experience a flexible and user-friendly application tailored to your needs. With WebApp's ability to lock COMPASS Pro device settings, you maintain control while offering field management and mobile accessibility for efficient monitoring.

Emergency Awareness (Compass Pro): Cutting-edge technology for real-time safety. COMPASS Pro® detects emergency situations by continuous monitoring and immediate reporting of field events such as arc flash, no movement, and impacts to the head. With these critical alerts, the WebApp ensures that the most vital information is disseminated to emergency contacts in real time.

Emergency Response Assistance: In critical situations, the WebApp acts as a lifeline. It enhances awareness and facilitates a quick, informed response, ensuring your team is protected, and can act swiftly and decisively during emergencies.

The WebApp's Emergency Response Solution (ERS) introduces "situational awareness" to emergency situations, offering immediate and automatic communication alerting identified individuals in the field. This groundbreaking capability saves critical life-saving time and ensures seamless communication for individuals, teams, and entire organizations.

"We are thrilled to introduce the WebApp as the latest addition to our Safeguard Solution Suite," said Tim Ledford, CEO at Safeguard Equipment. "With its advanced features and capabilities, the WebApp sets a new standard for safety and efficiency in the safety sector, empowering companies to protect their teams and optimize their operations like never before."

The WebApp is now available as part of Safeguard Equipment's comprehensive suite of safety solutions, providing companies with the tools they need to navigate the challenges of modern operations safely and efficiently.
